

## Solar for Schools Assembly and Workshops

On Wednesday 10<sup>th</sup> April 2024 a representative from Solar Schools, the supplier of our solar panels visited the school and as part of their annual maintenance check also kindly delivered an assembly to the children about renewable energy - its pluses and minuses as part of a bigger picture as society strives toward the goal of net zero. Following this, the Key Stage classes each had a workshop in which they looked at the basics of electrical circuitry and had a go at creating a circuit that demonstrated handheld solar panel current generation. Our visitor also took members of the Eco-Committee for a more in-depth session in which a drone was deployed as part of the health check for the panel on our roof.
